PW SKILLS · DATA ANALYTICS PROJECT

Personal Expense Tracker Dashboard

A Microsoft Excel dashboard for monitoring, analyzing, and controlling personal spending across categories within a selected date range.

Period Analyzed: 01 Mar 2026 – 16 Mar 2026

Grand Total Spend: **₹72,298**

Presented by

Asrarul Haque

Project Overview

OBJECTIVE

Monitor and analyze personal expenses across spending categories within a selected date range — helping users understand spending patterns, control unnecessary expenses, and make better financial decisions.

BUSINESS PROBLEM

People record expenses in Excel but struggle to answer key questions:

- Where is most of the money being spent?
- Which category has the highest expense?
- How much was spent during a selected period?
- Which expenses should be reduced?

THE SOLUTION

An interactive Excel dashboard that presents category-wise spending, percentage distribution, and comparisons in a simple, visual format — turning a raw expense sheet into a decision-making tool.

72,298

₹ TOTAL EXPENSES (1–16 MAR 2026)

across 9 spending categories

Dataset & Data Preparation

DATASET FIELDS

- Date
- Category
- Amount
- Description (optional)
- Payment Mode (if available)

9 EXPENSE CATEGORIES TRACKED

Travel	**Transport**	**Shopping**
Rent	**Insurance**	**Health Care**
Food & Dining	**Education**	**Bills**

DATA CLEANING STEPS

1. Removed duplicate records
2. Checked for blank / missing values
3. Standardized category names
4. Converted dates into proper Excel date format
5. Verified all expense amounts were numeric
6. Organized data into an Excel Table for easy updates

Excel Features Used

A blend of data structuring, analysis, and visualization tools built the interactive dashboard.

1

Excel Tables

Structured, easily-updatable data range

2

Pivot Tables

Fast category-wise aggregation

3

Pivot Charts

Charts that refresh with the data

4

Slicers / Filters

Interactive drop-down filtering

5

Pie Chart

Percentage distribution by category

6

Bar Chart

Side-by-side category comparison

7

Date Filtering

Analysis within a chosen date range

8

Conditional Formatting

Visual cues for spend levels

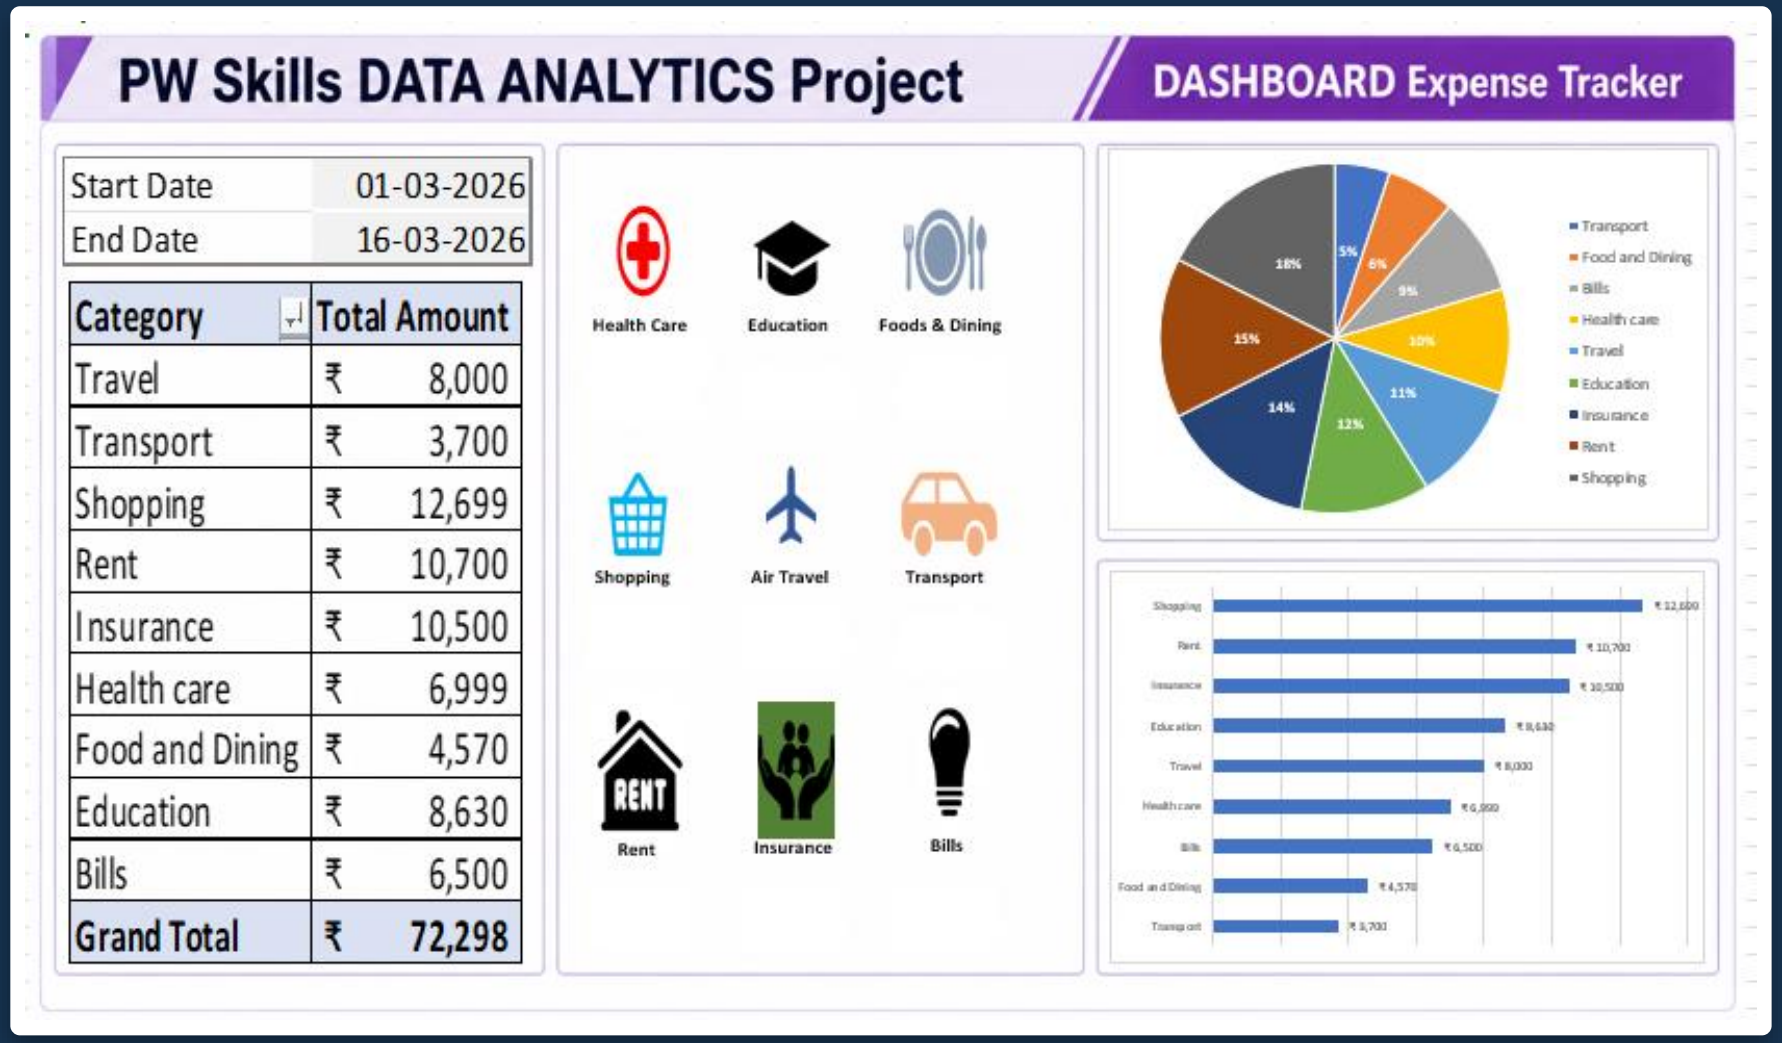

9

Dashboard Layout Design

Clean, single-screen summary view

The Dashboard

Single-screen view: date filter, category table, icons, pie & bar charts

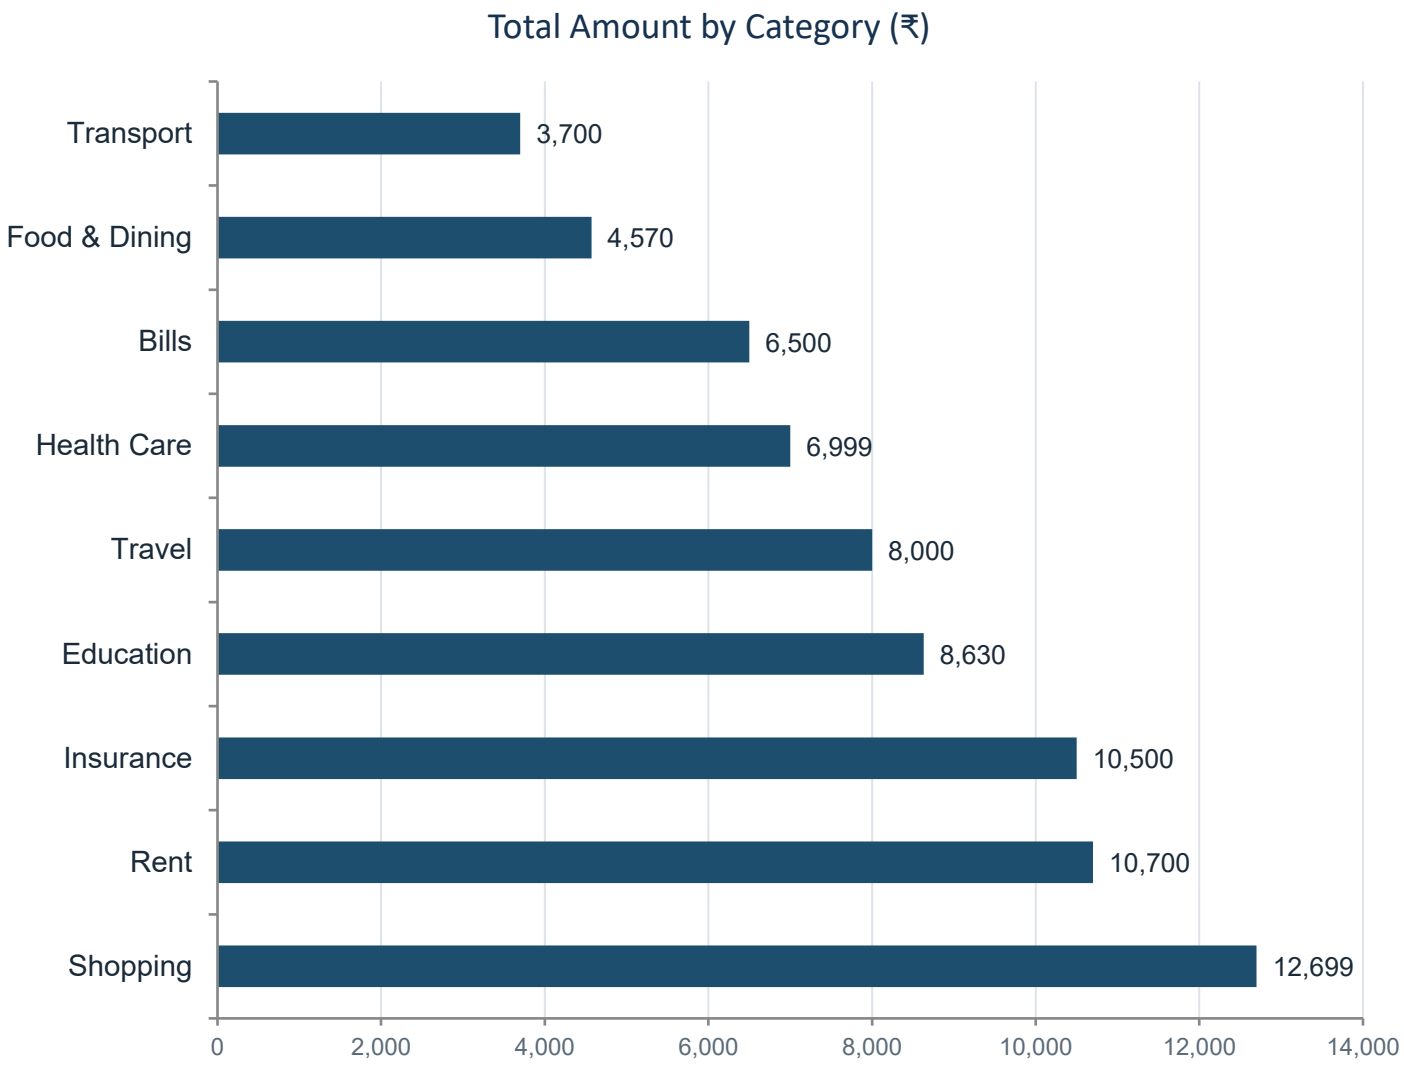

Key Insights

₹72,298	Shopping	Rent & Insurance	Transport
Total spend, 1–16 Mar 2026	Highest expense category (17.6%)	Next largest contributors	Lowest expense category

WHAT THE DATA SHOWS

- Shopping alone accounts for over a sixth of total spending — the single largest discretionary category.
- Rent and Insurance together represent a large, largely fixed share of the budget.
- The dashboard makes it easy to distinguish essential (Rent, Insurance, Bills) from discretionary (Shopping, Travel, Dining) spend.
- Transport's low share suggests strong cost control in that category — a pattern worth replicating elsewhere.

Category-wise Expense Breakdown

RANKED BY SPEND

1.	**Shopping**	**₹12,699**
2.	Rent	**₹10,700**
3.	Insurance	**₹10,500**
4.	Education	**₹8,630**
5.	Travel	**₹8,000**
6.	Health Care	**₹6,999**
7.	Bills	**₹6,500**
8.	Food & Dining	**₹4,570**
9.	Transport	**₹3,700**

Business Recommendations

1. Reduce discretionary spending in high-expense categories such as Shopping
2. Set monthly budgets for each category
3. Monitor recurring expenses like Rent and Insurance regularly
4. Review expenses weekly to avoid overspending
5. Use historical data to compare monthly spending trends

Challenges & Future Improvements

CHALLENGES FACED

- Organizing expense data into meaningful categories
- Designing a clean and easy-to-read layout
- Ensuring charts updated dynamically when data changed
- Selecting visuals that clearly communicate spending patterns

FUTURE IMPROVEMENTS

- Monthly expense trends
- Income vs Expense comparison
- Savings tracker
- Budget vs Actual analysis
- Payment mode analysis (Cash, UPI, Card)
- Automatic refresh using Power Query
- VBA button for one-click updates
- Forecasting future expenses

Project Summary

This Personal Expense Tracker Dashboard, built in Microsoft Excel, analyzes personal spending across categories within a selected date range. Using Excel Tables, Pivot Tables, Pivot Charts, and data visualization, it surfaces total expenses, category-wise spending, and percentage distribution — helping users see where they spend the most and plan their budgets with confidence.

9	₹72,298	16
Categories Tracked	Total Spend Analyzed	Days in Period

Thank you
