TABLEAU PROJECT 4

Job Insight Dashboard

HR Analytics using Tableau

An interactive HR dashboard for workforce distribution, salaries, hiring trends, gender diversity, education levels and job roles.

Presented by Asrarul Haque

Project Overview

Project Objective

To analyze employee data and provide HR managers with an interactive dashboard to monitor workforce distribution, salaries, hiring trends, gender diversity, education levels, and employee job roles.

The dashboard supports HR teams in making data-driven recruitment and workforce planning decisions.

AT A GLANCE

10	Job Roles Tracked
7	Dashboard Visualizations
161	Total Employees Analyzed
4	Education Categories

Business Problem

An organization employs people across multiple job roles and departments. HR managers need quick answers to key workforce questions:

1. Which job roles have the highest number of employees?
2. What is the gender distribution?
3. What is the age distribution of employees?
4. How has hiring changed over the years?
5. What are the salary levels for different employees?
6. What is the education qualification of the workforce?

Without an interactive dashboard, HR teams would need to manually review employee records.

Dataset & Data Preparation

Dataset Fields

- Employee ID
- Employee Name
- Gender
- Age
- Job Title
- Salary
- Date of Joining
- Leave Balance
- Education Qualification
- Department

Data Preparation Steps

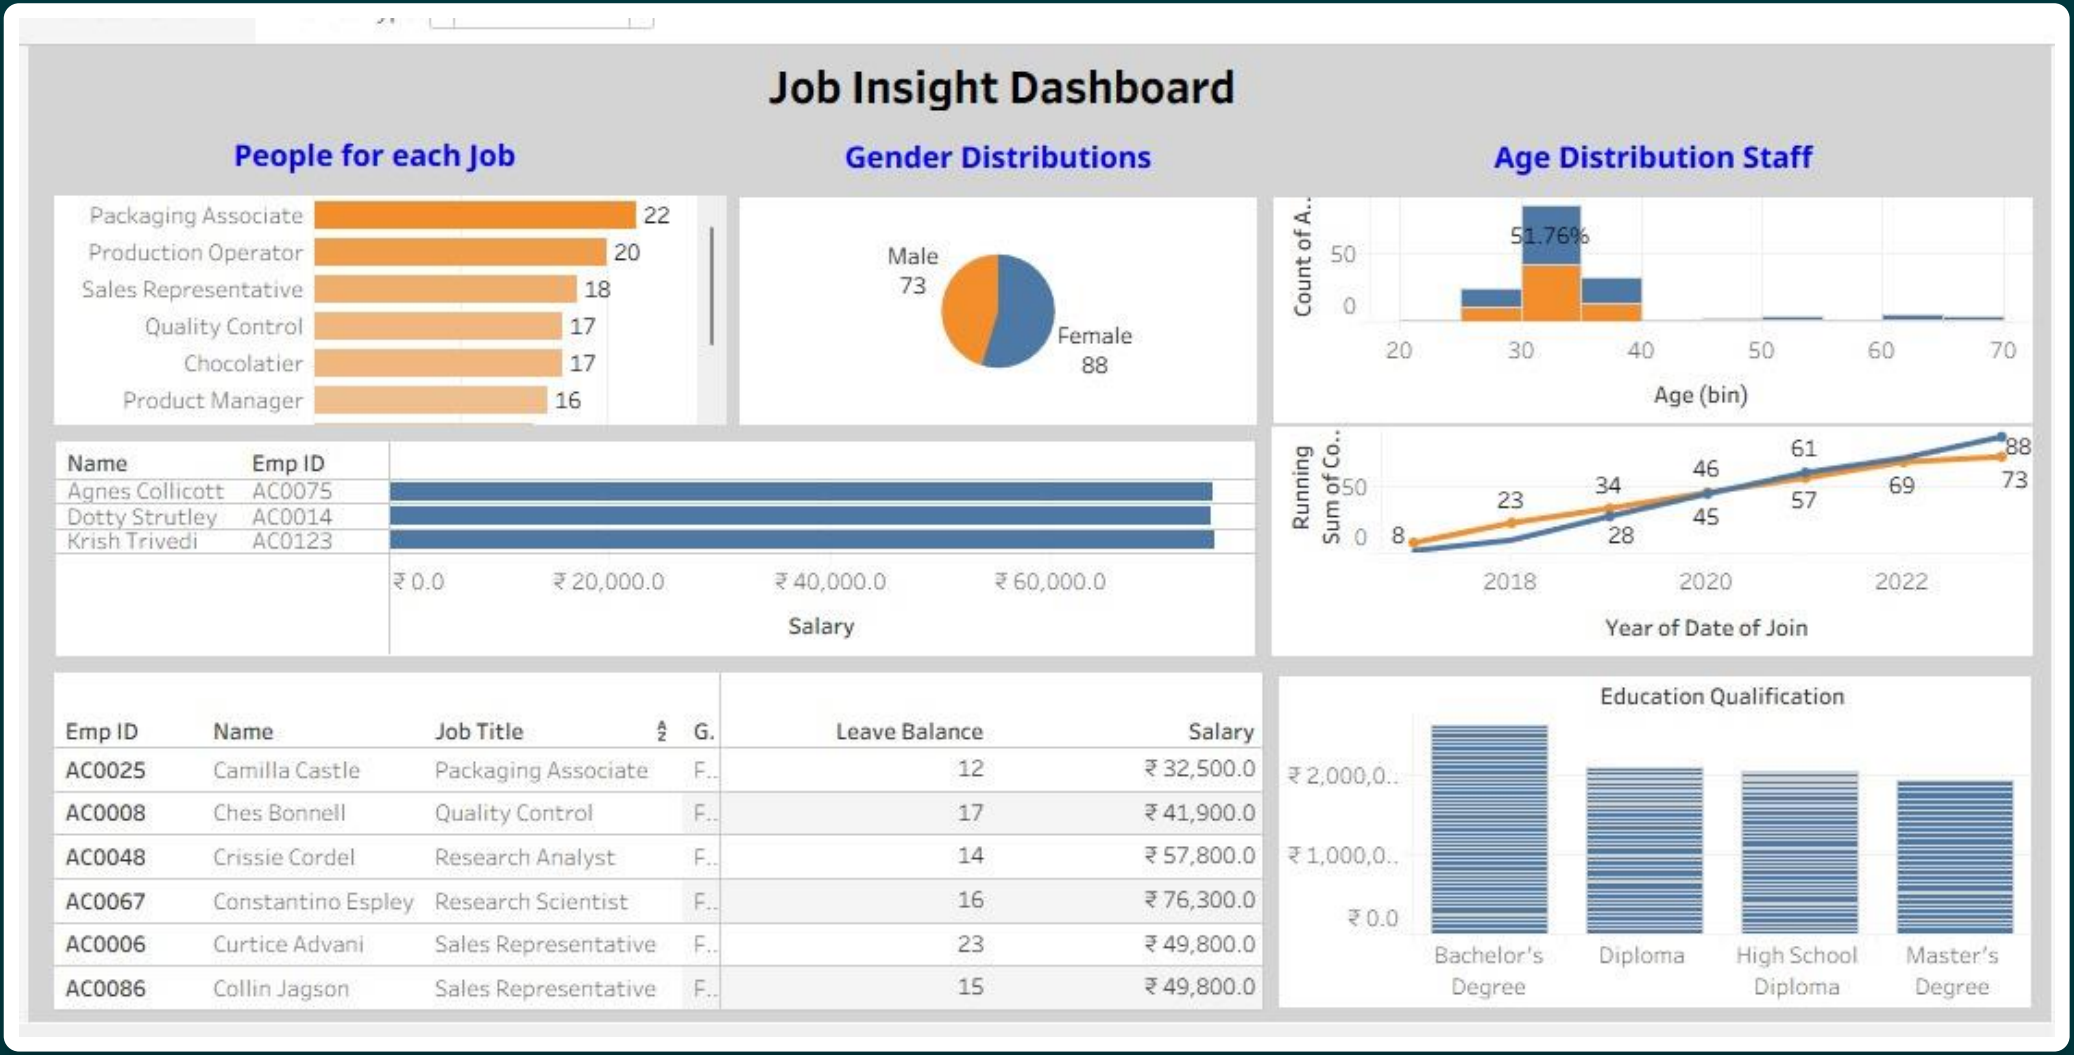

1. Imported the employee dataset into Tableau
2. Removed duplicate records
3. Checked for missing values
4. Standardized job titles and education levels
5. Corrected data types
6. Created calculated fields where required
7. Verified salary and leave balance values

Tableau Features Used

- ✓ Worksheets
- ✓ Dashboards
- ✓ Calculated Fields
- ✓ Filters
- ✓ Dashboard Actions
- ✓ KPI Analysis
- ✓ Bar Charts
- ✓ Pie Chart
- ✓ Histogram
- ✓ Line Chart
- ✓ Tables
- ✓ Sorting

The Interactive Dashboard

Job Insight Dashboard — built and published in Tableau

Presented by Asrarul Haque

Visualizations — Workforce & Diversity

Employees by Job Role

Shows the number of employees in each job role, e.g. Packaging Associate, Production Operator, Sales Representative, Quality Control, Chocolatier, Product Manager.

BUSINESS VALUE

Helps HR understand workforce distribution across different roles.

Gender Distribution

Displays the number of male and female employees across the organization using a pie chart.

BUSINESS VALUE

Supports diversity and inclusion analysis.

Visualizations — Age & Hiring Trend

Age Distribution

Shows employee age groups using a histogram, highlighting where most of the workforce is concentrated.

BUSINESS VALUE

Helps HR understand workforce demographics and succession planning.

Hiring Trend (Year of Joining)

Displays employee joining trends over the years using a running total line chart.

BUSINESS VALUE

Shows hiring growth and recruitment patterns.

Visualizations — Compensation & Records

Employee Salary Analysis

Displays salary information for employees across roles.

BUSINESS VALUE

Supports compensation analysis and payroll planning.

Employee Details Table

Shows Employee ID, Name, Job Title, Gender, Leave Balance and Salary.

BUSINESS VALUE

Provides detailed employee records for HR review.

Education Qualification

Displays education levels: Bachelor's, Diploma, High School Diploma, Master's Degree.

BUSINESS VALUE

Helps HR plan training and development programs.

Key Insights

Packaging Associate has the highest employee count among all job roles.

Female employees slightly outnumber male employees in the current dataset.

30–40 age group accounts for most of the workforce.

Hiring has increased over recent years.

Bachelor's Degree is the most common education qualification.

Salary & leave balance vary by individual employee and role.

Business Recommendations

1. Plan recruitment for roles with lower staffing levels.
2. Continue monitoring gender diversity to maintain balanced hiring.
3. Design career development programs for employees in the largest age group.
4. Review salary structures regularly to remain competitive.
5. Provide skill development opportunities based on education and job role.

Challenges Faced

- Cleaning HR data with different job titles
- Standardizing education qualification values
- Designing multiple HR visualizations in a single dashboard
- Creating meaningful employee-level tables while keeping the dashboard easy to read
- Ensuring smooth interaction between charts and tables

Future Improvements

- Employee Attrition Analysis
- Department-wise Performance Dashboard
- Attendance Analysis
- Leave Trend Analysis
- Recruitment Funnel Dashboard
- Employee Satisfaction Survey Analysis
- Promotion Analysis
- HR KPI Dashboard
- Diversity & Inclusion Metrics

Thank You
